FIND OUT MORE ABOUT THE BRITAX STAMP OF QUALITY User Guide Please read the user instructions first. And while the Britax First Class Plus might look big for a tiny baby, babies grow fast.The audible click fasten and 5point harness with onepull adjustment mean it's quick and easy to secure your child, once you get the hang of it. And the five recline positions for when the seat's forward facing ensure happy nappers. The Britax First Class Plus was quite a revelation. He is comfortable, high up so able to see out the window and other than one hysterical journey he's been happy ever since. However, if you're a first time mum it might be worth asking other friends with similar lifestyles to you how much they actually did move their car seat around. Personally, as a fairly infrequent driver, I would have given up the portability of my Group 0 car seat for the happier, more comfortable child, particularly in that inbetween stage of 69 months. And you don't have to buy a second car seat to see them through to 4.

It only has to be done three times in the life of the seat, but it isn't very easy. Our Vauxhall Zafira is tall, so the slight acrobatic move to get him over the restraining seat belt and under the car roof isn't too bad, but people with smaller cars have found it very difficult. The other huge benefit is that it can change from rearward facing to forward facing as your child's need change. However, with this versatility and long life you sacrifice portability and travel system compatibility, and depending on your needs, this may or may not be a concern for you. Offering superior protection with its side impact protection plus performance chest pads and pitch control system, this seat is designed to reassure parents. Another unique aspect is the belt fitting system, as it has two different routing options when used forward facing to work better with belts of different lengths and to help prevent buckle crunch. The slim base of the seat allows for a secure fit in cars with sculpted seats. Ready for even the smallest child, the newborn insert and extended recline position whilst rear facing allow for additional comfort and support. The FIRST CLASS PLUS is built with practicality in mind; its light weight means you can transfer it easy between cars, and the quickremove cover means theres no need to take off the harness when you need to wash the seat cover.You will be redirected to our finance provider, V12 Retail Finance, who will guide you through the simple 2 minute application to apply for your finance. Cosmos Black If you accept this information or continue using this website we assume that you agree to it. Over time, dirt and grime can accumulate and prevent a seat from performing to the highest degree of safety. That's why we recommend that you periodically clean the car seat cover, harness straps, and buckle. The following cleaning instructions apply to all Britax car seats; if you have seats from another manufacturer, please refer to your user guide and fabric care labels. To Clean the Cover Follow user guide instructions to remove the cover from the car seat. Vacuum the cover to remove the top layer of crumbs and debris before washing. Many car seat covers should only be hand washed using cold water and mild soap. Do not machine wash, dry or iron the cover, unless the manual states that it's safe to do so. The Britax SafeWash fabric offers a knit construction that's naturally flame retardant, so it's safe to machine wash and dry. Again, most cover sets should lie flat or line dry to prevent the cover from shrinking. Reattach the cover. To Clean the Buckle Follow the user guide instructions to safely remove the buckle from the seat. Rinse the buckle with warm running water. Don't soak the buckle or use soap, household detergents, solvents, or lubricants.

<http://www.philipsong.com/images/comet-ex-rt-11kva-user-manual.pdf>

Anything that has a lubricant type compound can affect the performance of the buckle. Test the buckle by fastening and unfastening each of the buckle tongues for both sides until you hear a click after inserting each buckle tongue. If you don't hear clicks for each buckle tongue you may need to repeat the cleaning process. Dry the buckle with a towel and reattach it to the car seat. To Clean the Harness Straps Use warm water and mild soap to spot clean your car seat harness straps. Do not submerge the straps in water or use harsh soaps, as that may weaken the fibers. Do not machine wash, iron or bleach the harness webbing. Remember, the straps are one of the most delicate parts of the car seat, so you want to be cautious of how you clean them. If your harness strap is frayed or heavily soiled, it is best to order a replacement. Additional Tips Wipe down the armrests and clean out the cup holders, if the car seat has them. Some cup holders can actually be removed and washed in the dishwasher. Refer to your user guide for specific cleaning instructions. To remove crumbs that have fallen deep within the seat, you may even need to tip the seat upside down and shake it. Take this opportunity to make sure your child still fits properly in their car seat. Consult the user guide for fitment and installation. You can also order replacement parts by contacting our customer service department. Minimize Messes with Britax Travel Accessories To help minimize future clean ups, Britax offers accessories designed to protect both your car seat and your vehicle seat. The Seat Saver Waterproof Liner has deep sides and fits securely into the seating area of all Britax harnessed car seats to contain liquids and crumbs and prevent messes from reaching the car seat. Add mounting aids such as damped function lock and tension of the harness and the choice between two possibilities passage of the harness for a compact multitalented and very light, which can be mounted easily in various types of vehicles. The practical fasteners on the side to the harness easy installations and outputs of your child. Special Features. The First Class Plus provides optimum side impact protection as well as outstanding comfort. You little one is to be secured with a fivepoint harness and the First Class Plus with the threepoint harness of your car respectively. The springloaded shoulder belt control ensures a correct and easy installation of the car seat. The belt can be positioned in two different options requires the car seat to be used in a forwardfacing mode which is perfect for cars with shorter belts. This way, you can easily adapt the belts of the car seat to your child's size. Special performance chest pads reduce a shifting of the head as well as the level of stress in case of an accident. An extended sleeping position with the seat insert provides a natural sleeping behaviour requires the car seat to be used in a rearfacing mode.All fabrics used are easy to clean and feature a soft and smooth surface. The covers can be removed and machine washed if required. Very easy to install on my car. Nice shopping experience at kidsroom.de!Easy to install in

the car And the Service is very Good. The shipment is very quick. I like this great shipping on this website. Thanks Cannot be used for placed orders. By choosing an ISOFIX car seat, you are choosing one of the safest ways for your child to travel in the car. But what is it exactly and why is it so safe. As leading specialists in child mobility, we are eager to share all there is to know for parents about ISOFIX. At MaxiCosi we offer an ISOFIX solution in each age category; baby, toddler and child. Most firsttime parents install our baby car seats correctly thanks to the easytouse ISOFIX base.

For toddler car seats, you can either choose for a car seat that is installed with your car's seat belt or with ISOFIX. For child car seats, you can choose for an ISOFIX car seat in addition to the seat belt, for a more stable seat. The i Size regulation only applies to ISOFIX car seats, because they reduce the risk of incorrect installation. Learn more about car seat legislation and find out how we, as MaxiCosi, stay up to date with the latest car seat laws. These days, at least 60% of all European cars has ISOFIX, so there is a big chance that yours will have it too. The easiest way to find out, is to check the user manual of your car. In case your car does have ISOFIX, you will find an ISOFIX logo or label at the base of the seat. Find out which of our car seats fit your car in our Car Fitting List. Because we know that children like to do everything by themselves, we have designed our child car seats especially for them, so they can buckle up all by themselves. The 5point harness on the first class plus also keeps your baby safe and secure, with soft padding and 2 ways of fastening for added support. A unique pitch control system on the Britax Romer first class plus car seat reduces forward movement in the event of sudden braking or an accident, and built in side impact protection provides extra layers of padding to protect you child in the event of a side on collision. We recommend that you check this car seat is compatible with your vehicle before purchasing. Please click here to view the manufacturers fit guide. dont forget. not all car seats fit all vehicles, our trained staff will check the compatibility and ensure you get the right car seat for your vehicle. Care instructions Machine Washable 30 degree delicate wash Please Sign in or create an account Please see individual product pages for details. Product you would like to return must be in its original state, unused and in original packaging.

The exchange must be done within 14 days from purchase, and proof of original Web Order receipt is required. Click here for more information. Many parents wonder which option is the safest way to install their childs car seat. In situations where either installation method is allowed, one is not usually safer than the other. First, as kids get heavier, most car seats require you to use the seat belt rather than the lower anchors of the LATCH system, as the seat belt is stronger. Second, car seats that feature rigid LATCH—rather than a lower anchor strap—are typically safer when installed with rigid LATCH vs. For most seats, it isnt safe to use both lower anchors and the seat belt at the same time. Thats right Whether your forwardfacing car seat is using the seat belt or the lower anchors, you always add the tether strap to secure the top of the forwardfacing car seat. A few rearfacing car seats also use tether straps. The exception is rigid LATCH, which is a safer installation method than a lower anchor strap or a seat belt. The seat belt holding a car seat must be locked at all times, which means the belt can not get looser. This is very different from how our seat belt is when we ride; it only locks when you slam on the brakes. Most feature a mechanism where if you pull the seat belt slowly out to the very end, as you let it back in it will continue to lock and shorten. It only switches back to normal when you let the belt back in all the way. Some car seats have builtin locking devices for the seat belt that often make installation easier. The seat belt also needs to be tightened, so that the car seat moves less than one inch in any direction when checked at the belt path. You will also be prepared in case you need to install the car seat in an older vehicle that doesnt have the LATCH system. However, an older vehicle will likely be quite different and more challenging than a newer car.

If the vehicle is pre1996, it most likely wont have the locking mode built into the seat belt. Also, older vehicles without LATCH wont have tether anchors, and therefore arent suitable for

forwardfacing installations. You can install the car seat in more of the rear seating positions, since you aren't limited to positions with lower anchors. Some car seats feature builtin seat belt lockoffs that are easy to use. These builtin lockoffs allow you to lock the seat belt without needing to understand if the seat belt has its own locking mechanism or how that works. Some car seats feature seat belt tensioning devices, many of which also lock the seat belt. These tensioning devices often significantly reduce how much force is needed to tighten the seat belt. It will tell you how to lock the seat belt if necessary and will give any important installation details specific to your vehicle. The lower anchors are metal Ushaped or horizontal bars. These are sometimes hidden inside the vehicles seat crease, and sometimes are visible sticking out from the seat crease. Most vehicles have two sets of lower anchors, one on the driver side and the other on the passenger side in the back. A few vehicles may have sets of lower anchors in all three backseat positions. Often the center seat in the second row and many positions in the third row in vehicles with a third row will not have lower anchors. Even if you have one of the few vehicles that do allow this, make sure the car seat you are using also allows this. Even if you can easily locate those lower anchors, you should still read through the LATCH section of your vehicle owners manual. It will give you installation advice specific to your vehicle. It may look like the lower anchors, but theres only one per set of lower anchors. In an SUV or minivan, the tether anchor is most often found on the back of the vehicle seat where the car seat is installed. However, in a sedan it is always on the shelf below the rear windshield.

The vehicle owners manual can give you the exact location of any tether anchors in your vehicle. They may even be loops of webbing instead of metal. You must read the vehicle owners manual to learn how to use this type of tether anchor. It is one of the only types where more than one car seat could share an anchor. Car seats have a way to connect to the lower anchors. Most use a strap with some type of a hook that connects to the vehicles lower anchors. A few car seats have rigid LATCH where the connectors are rigidly attached to the frame of the childs car seat and there is no strap involved. All forwardfacing car seats have a tether strap, which is a strap with a hook on the end that comes from the head of the childs car seat and connects to the tether anchor in the vehicle. A few rearfacing car seats also use tether straps. A seat belt installation where the seat belts builtin locking mode is used will often cause a tilt. A seat belt installation using a builtin seat belt locking device on the car seat which means you dont have to use the seat belts own locking mechanism wont tilt the car seat. Seats with rigid LATCH which are less common offer a much easier installation than those with a lower anchor strap. The stickers on the side of the car seat will also give some basic directions on LATCH usage for your particular car seat. Most vehicles do not have a set of lower anchors dedicated to the middle seat, and most do not allow the use of the inner anchors from either side for installation in the center. Check the vehicle owners manual to see if this is allowed. Youll also need to consult the car seat owners manual to see if the manufacturer approves of the use of their seat with nonstandard spacing of lower anchors. A passenger cant take a direct hit in the center. Sitting in the center reduces the risk of injury from about 0.28% to about 0.17% for kids three and under. So while it is safer, it is just a tiny bit safer.

If the vehicle manufacturer put lower anchors and tethers in the outboard spots, they clearly intended for children to ride there, and the vehicle has been tested that way. Car seats are labeled with a maximum weight for installation with the lower anchors. The maximum weight for a lower anchor installation may be different when the seat is used rearfacing than when it is turned forwardfacing. Remember to continue using the tether strap on forwardfacing car seats, whether you are using seat belt or lower anchors for the installation. The car seat manual will give details on when to switch between LATCH and seat belt. Get guidance from the vehicle owners manual and the car seat instruction book. Ask a certified child passenger safety technician if you need additional help. Bottom line The safest installation method is the one that you are able to get the tightest installation and is approved by the car seat and vehicle manufacturer. Get it free when you sign up for our newsletter. Read our editorial process to learn more about how we factcheck and keep our

content accurate, reliable, and trustworthy. Car seat installation information Seat belts and LATCH. Updated February 24, 2020. Seating patterns and corresponding risk of injury among 0 to 3yearold children in child safety seats. The recline position and newborn insert provide additional comfort. As your baby grows, simply remove the insert to provide more space. Not a member Join today Need further assistance. Forgot username or password. Not a member Join today Need further assistance. Please call Member Services at 18003330663 After research, many firsttime parents learn that the safest configuration for carseat installation is often the rear middle seating position. But thats only true if they can achieve a secure installation with either the center seat belt or lower anchors found in the seat crease.

In this case, the spacing between the anchors could be wider, so the specific carseat manufacturer also needs to allow for this type of installation. LATCH stands for Lower Anchors and Tethers for Children. It includes the lower anchors found at the seat crease and the top tether anchor often found on the back shelf or behind the rear seat. A LATCH installation generally means attaching the car seat with the lower anchors, not the seat belt. The top tether should be attached to the tether anchor for all forwardfacing carseat installations, whether using the seat belt or lower anchors. ISOFIX is the term used for the LATCH system in Europe, so owners of European cars will often see it accompanying the lower anchor icon in their vehicle. Refer to the top image of the article. When a rear center seat doesnt have its own dedicated lower anchors, the two innermost lower anchors from the outboard seating positions one from each side can be "borrowed" for a lower anchor installation. These anchors typically cant be used at the same time to install a car seat in the outboard seating positions. The standard spacing between the anchors is 11 inches. But when borrowing lower anchors for a center seat installation, the spacing no longer adheres to the regulated 11 inches. It's important to know just how widely spaced the anchors are in your car. You can refer to the Child Safety section of the vehicle owner's manual to determine the distance between the innermost lower anchors. Federal safety regulations specify strength requirements for lower anchors. For each vehicle, the lower anchors must pass federal forward and lateral strength tests for each designated seating position with dedicated anchors that are 11 inches apart. So make sure to consult the owners manual. It's important to determine whether the automaker allows for the innermost lower anchors to be borrowed for a center seat carseat installation.
